PAMS Model 3310
Portable Aerosol Mobility Spectrometer

PAMS is an electrical mobility size spectrometer designed for portable, mobile, or handheld aerosol sampling applications, equipped with a detachable charger. It provides the number-weighted diameter distribution of aerosols over the entire submicrometer range (10 to 863 nm) in one scan. The unit uses a non-radioactive bipolar aerosol charger to allow easy access to sampling sites with tight safety regulations. Its bipolar charger significantly reduces measurement uncertainty of larger particles in the submicrometer range.

Applications

- Personal Nanoparticle/Aerosol Exposure Measurement
- Workplace protection factor measurement of respirators
- Atmospheric process studies
- Air pollution and air quality measurements
- Combustion and engine exhaust emission measurements
- Filtration studies
- Inhalation toxicology studies
- Indoor air quality studies

Key Features

- Electrical mobility size spectrometer designed for portable, mobile, or handheld aerosol sampling applications, equipped with a detachable charger
- Provides number-weighted diameter distribution of aerosols over the entire submicrometer range (10-863 nm) in one scan
- Uses a non-radioactive bipolar aerosol charger to allow easy access to sampling sites with tight safety regulations
- Bipolar charger significantly reduces measurement uncertainty of larger particles in the submicrometer range
- Can be used in two modes:
  - Single diameter count mode: to get a total count within a narrow size range
  - Size distribution mode: to get an automated size distribution measurement over desired size range or size resolution
- Stand-alone, battery-operated instrument; no external computer needed. Weighs only 5.0 kg and measures 23 x 23 x 15 cm.
Operation:
Sampled aerosol is charge-conditioned using a non-radioactive, bipolar charger which brings the particles to steady-state charge distribution. Particles are subsequently sorted according to their electrical mobility in a differential mobility classifier (DMA). Classified particles are detected and counted downstream using a condensation particle counter (CPC).

Portable Aerosol Mobility Spectrometer (PAMS) is developed using technology licensed from the National Institute for Occupational Safety and Health (NIOSH)

<th>Portable Aerosol Mobility Spectrometer (PAMS) Model3310 Specifications</th>
</tr>
</thead>
</table>
| Measuring Modes | Single size mode (single size concentration)  
Scan mode (size distributions) |
| Particle Size Range | 0.2LPM: 14.5 to 862.3 nm  
0.4LPM: 10 to 433.7 nm |
| Scan Resolution | 0.2LPM: 14 channels  
0.4LPM: 27 channels |
| Scan Time | 0.2LPM: 56 sec to minutes for one scan  
0.4LPM: 108 sec to minutes for one scan |
| Concentration Range | 0 to 100,000 particles /cm³ |
| Flow Rate | Inlet: 0.7 LPM  
Sample: 0.05 LPM |
| Bipolar Charger | Dual corona charger with corona current less than +/- 5 uA |
| Condensing Fluid | Isopropyl alcohol |
| Interface | USB  
Color touchscreen |
| Display | |
| Power Source | Li-ion battery or AC adapter  
Battery life: continuously for 6 hours |
| Operating Environment | Temperature: 10-35 °C  
Humidity: 20-85 %RH (with no condensation) |
| Dimensions (WHD) / Weight | 9.1 x 9.1 x 5.9 inch (23 cm x 23 cm x 15 cm) / 11 lbs (5.0 kg) |
